Course Outline

Computer programming

- Basic terminologies (algorithm, variables, data types, etc.)
- Understanding the logic behind coding
- Introduction to computer programming
- Introduction to programming languages (e.g. Python, Java, C++)

Debugging common coding errors

- Conditional statements and using logic in code
- Introduction to object-oriented programming (OOP)
- Collaborating on a group project to create a program
- Reflection on the projects created and what has been learned

Course Outline

HTML and CSS

- Introduction to HTML tags and structure of a web page
- Creating a simple web page using HTML tags
- Understanding CSS styles and how to style web pages
- Applying CSS styles to web pages

Robotics and physical computing

- Introduction to robotics and physical computing
- Understanding how robots work
- Programming robots to perform basic tasks
- Understanding microcontrollers and how to use them

Course Outline

Introduction to Game Development

- Understanding game development concepts
- Building a simple game using Scratch
- Introduction to game engines (e.g. Unity, Unreal Engine)
- Understanding game design principles (e.g. game mechanics, level design)

Data Science with Python

- Introduction to Data Science
- What is Machine learning and Artificial Intelligence
- Create very simple neural networks using Python
- Introduction to supervised learning

HTML & CSS

Sensors & Microcontrollers

Learning Outcomes

Game Development Concepts

Data Science

Key Points

Learn how to create a style web pages to make them look great

Get a glimpse into the world of robotics

Create your own robots

Discover the exciting world of game development
